

Learning Outcomes - Biological Control

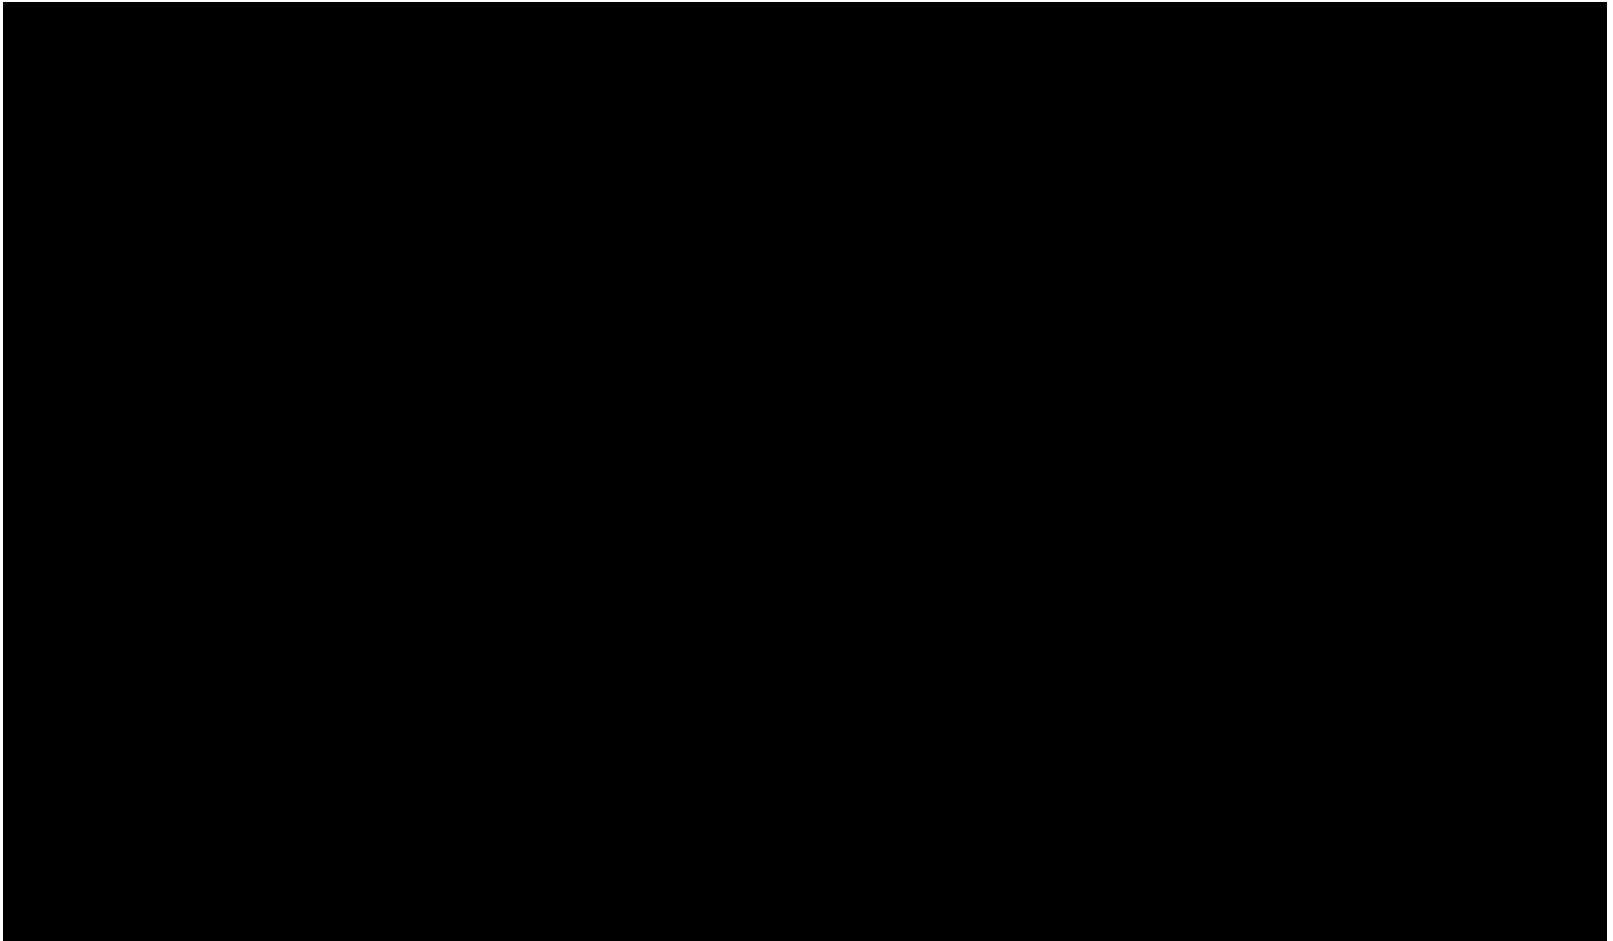

- To describe the use of one species to control the numbers of a pest species
- To describe how biological control and GM crops can reduce the negative effects intensive farming have on the environment

Biological Control - Activity

Using as many resources as possible, produce an investigation into Biological control. Your report should detail;

- The pest species
- Negative impact pest has on the environment
- Control species and why it was chosen
- Potential drawbacks of control species
- Negative aspects of intensive farming
- Advantages to be gained from Biological control and potentially GM crops

Biological Control - Greenhouse Pests

Success Criteria : I can

- Produce a report detailing how Biological control and GM crops could reduce the effects of intensive farming on the environment
